Cole Crop Plant Instructions

Cole Crops like this Kale, Collards, Kohlrabi, Rutabagas, Mustard and Turnips. These can be planted early on in the Spring work the soil when doing so. For a most triumphant result choose a warm and sunny location and prepare the seed bed. First loosen up that soil with a fork, fertilize (look up what's best for plant) smooth out the soil with a rake after. Sow seeds .5 inches deep and 2 inches apart in rows of about 24 inches apart. Make sure to firm soil and keep moisture. Seeds germinate within 14 days. Seedlings will get to 2- 4 inches tall thin to about 9-12 inches apart (about 18 inches for Collards). Fertilize ever month to a month and a half. Water regularly.
