All Pea Types Plant Instructions

Garden peas are a colder weather crop and should be planted about early spring just as soon you can work the soil (about 45 degrees F.) and again about two months before first frost for Fall crops. Sow seeds in sunny area (full sun) in well drained soil about 1 inch deep and 2 inches apart in rows of at least 2.5 feet apart.

Nitrogen will help produce more Peas
After planting seed will germinate in 7-14 days
DO NOT THIN Peas, Like this and similar / taller varieties need some support. Put a trellis between a double row sown half a foot apart and allow both rows to trail onto the same trellis.

Prime Temp
45-75 F

Prime pH
6 - 7

Hardiness Zones
6 & 7

Germination Rate: About 80%
