Tomato Plant Instructions

Start at a warm and sunny location 6-8 weeks before planting outdoors. Sow seeds no deeper than 1/4 inch in shallow containers in a sterile seed mix. (I've used fertile/rich organic soil) Keep Moist! Tomato seedlings will appear in about 7-14 days (80 degrees is best) bottom heat may be needed. Transplant to individual containers when seedlings have at least 2 pairs of leaves. Before planting outside, condition seedlings by moving to a sheltered spot outside for a week. Start off with only hour or two exposure, then start increasing time gradually until they are fully outdoors day & night.

Prime Temp
65-85°F

Prime pH
6.0-7.5

Hardiness Zones
1-13

Germination Rate: 80% and above
