Root Crops & Similar Plant Instructions

Start root crops like salsfiy, Parsnips, Carrots, Radish or Beets (also like Spinach / Swiss chard) by first selecting a sunny area with light, porous soil.

As soil can be,worked, cultivate very deeply and fertilize. Sow seeds .25 - .5 inches deep about an inch apart in rows at least 10 to 18 inches apart. Sow successively every two weeks in spring for constant crops, and resume sowing in mid July for The Fall harvest. Sees germinate in only about 10 days for radish, up to 28 days for parsnips. Firm soil over seed and thin to 3 to 4 inches (more for parsnips, spinach or swiss chard) when seedlings are about 2 inches tall.

Fertilize every month and keep moist.

Prime Temp
45-85°F

Prime pH
5-7

Hardiness Zones
3-9

Germination Rate: about 75%
